

The BoxTM

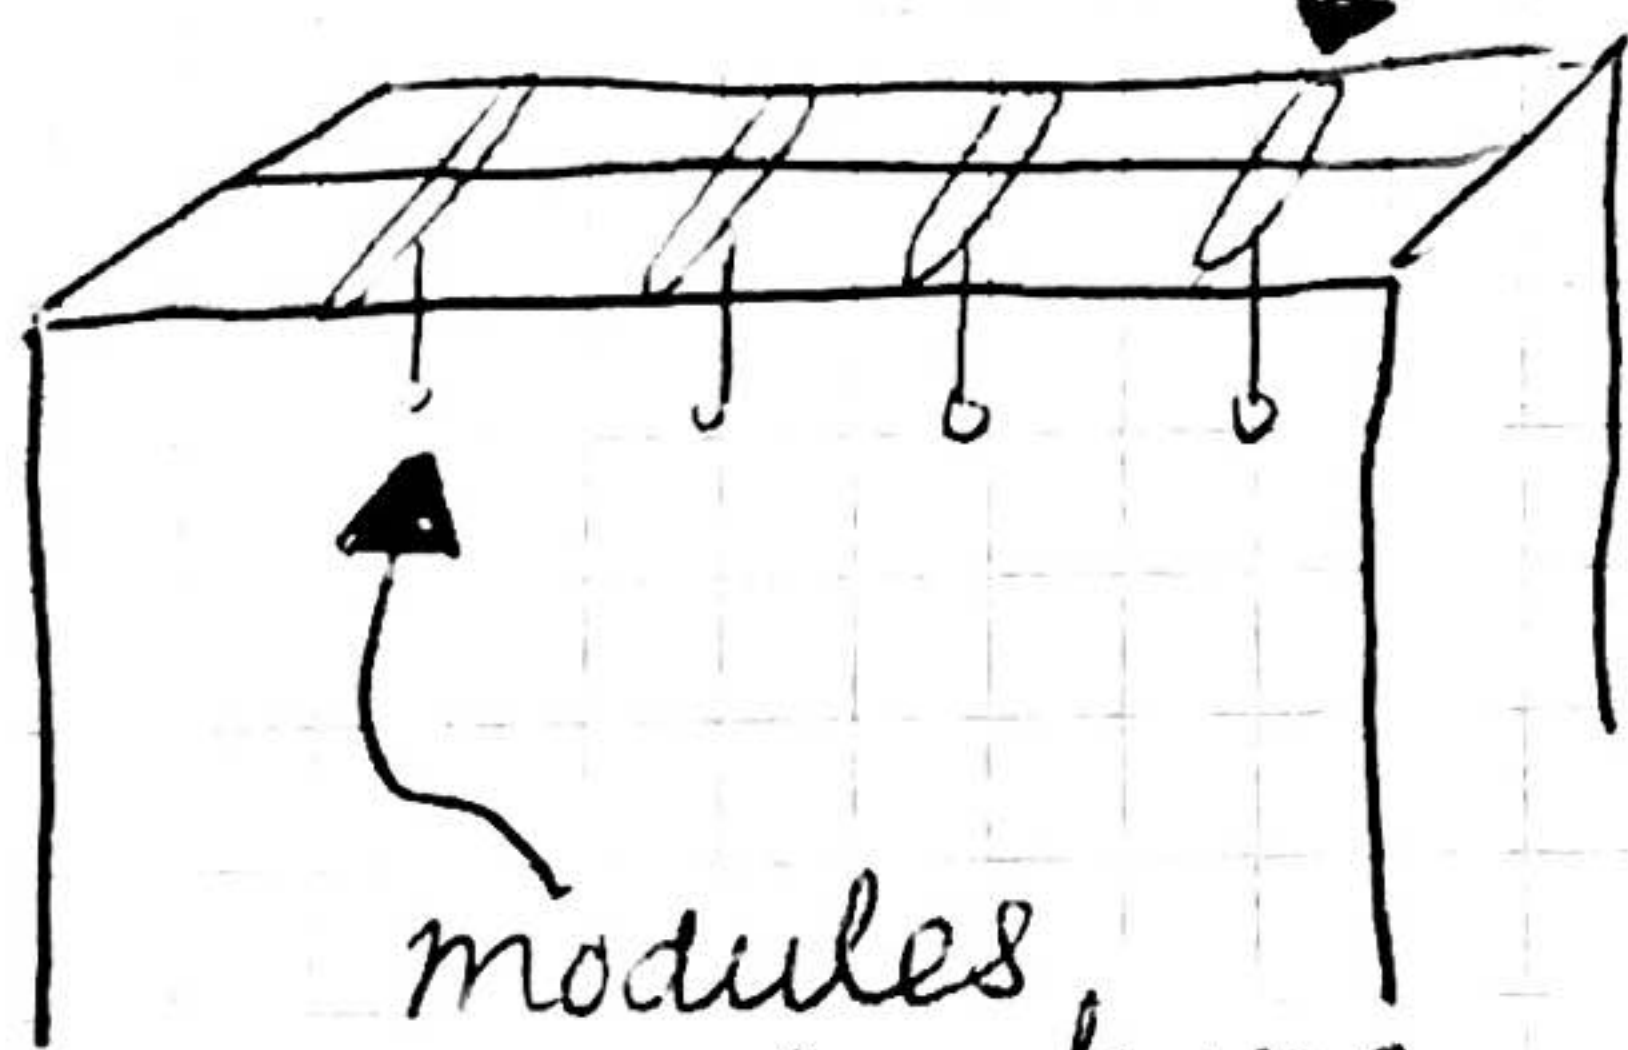

in between the plates, a small gap is present. To make the box watertight during the experiment, ducttape is added and removed afterwards

Additional bars with adjustable feet: to make box even on its base.

a plate of some sort to divide the inside into an experiment space (below) and an module space (above)

Rack to suspend the rail system for the modules from

curtain-railing to suspend modules from. Modules are not as big as the dimensions of the box, so there is space for wiring.
